

Project Demo Planning

Date	02 JULY 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Problem Intro & Dataset Setup	Briefly present the credit card default risk problem and the Kaggle source datasets (application_record.csv and credit_record.csv).	2 mins	Dasthagiri(Team Lead)
2	Data Engineering & Target Labelling	Show how status codes (30+ days overdue) are engineered into a binary target risk label and merged with applicant files.	3 min	Oleti Ashritha
3	Exploratory Data Analysis (EDA)	Present insights from customer demographic graphs, income densities, and the feature correlation heatmap.	2 min	Gnana Sathwick
4	Model Selection & Grid Search	Explain the preprocessor pipeline and compare performance metrics (Accuracy, F1, ROC-AUC) across LR, DT, XGBoost, and Random Forest.	3 min	Hemanth Kumar
5	Live Web App & Inference	Fill out the web demographics form live on screen to demonstrate real-time classification, probability scores, and the gauge meter	3 min	Pavani Jetti
6	Cloud Deployment & Build Automation	Show how build_assets.py automatically fits the model weights on server start and how it deploys via Render blueprint.	2 min	Chintapalli Yaswanth

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the objective: automating applicant credit risk evaluation to minimize bank defaults.
2	Solution Overview	Summarize the system's architecture (preprocessing pipeline, Random Forest champion, and Flask backend).
3	Live Feature Demonstration	Walk through the data script execution and submit sample profiles (low-risk and high-risk) on the live dashboard
4	Q&A Session	Answer questions on handling class imbalance (class weights), feature importance, and production scaling.
