

Project Initialization and Planning Phase

Date	15 March 202
Team ID	xxxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

I am a bank credit analyst who reviews large volumes of credit card applications daily	I'm trying to quickly and accurately decide whether to approve or reject each applicant	But manually reviewing income, existing loans, and credit inquiries for every application is slow and error-prone	Because there is no automated system that evaluates applicant financial and demographic data to predict approval outcomes in real time	Which makes me feel overwhelmed by application volume and worried about making inconsistent or incorrect approval decisions
--	---	---	--	---

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a bank credit analyst who reviews large volumes of incoming credit card applications daily	quickly and accurately decide whether to approve or reject each applicant	manually reviewing every application's income, existing loans, and credit inquiries takes too long and is error-prone	there is no automated system that evaluates applicant financial and demographic data to predict approval outcomes in real time	overwhelmed and worried about making inconsistent or incorrect approval decisions
PS-2	a financial compliance officer responsible for screening applicants for risk before approval	identify high-risk applicants, especially those with past-due loan records, and flag them as ineligible	raw payment status data comes in inconsistent multi-class codes that are hard to interpret and act on consistently	the payment status data hasn't been engineered into a clear, binary high-risk indicator that a model can classify reliably	anxious about compliance failures and the risk of approving applicants who are likely to default
PS-3	a prospective customer who wants to apply for a new credit card	understand my eligibility for approval before formally submitting my application	I have no way to check my likely approval outcome in advance based on my income, employment status, and credit history	there is no self-service tool that gives instant, data-driven feedback on credit card eligibility	uncertain and frustrated, risking wasted effort and a hard credit inquiry on an application that may be rejected
